INVESTMENT OBJECTIVE

The investment objective of the Dimensional Retirement Income Fund is to provide total return consistent with the Portfolio's asset allocation. Total return is composed of income and capital appreciation.

PRINCIPAL RISKS

Investment risks include loss of principal and fluctuating value. Value investing is subject to risk which may cause underperformance compared to other equity investment strategies. Small cap securities are subject to greater volatility than those in other asset categories. International investments are subject to additional risks such as currency fluctuation, political instability and adverse economic conditions. Fixed income securities are subject to increased loss of principal during periods of rising interest rates and may be subject to various other risks including changes in credit quality, liquidity, prepayments, and other factors. Inflation-protected securities may react differently from other debt securities to changes in interest rates.

Investments in funds are subject to the risks of their underlying funds, and asset allocations are subject to change over time in accordance with each fund's prospectus. Retirement income from a target date portfolio is not guaranteed at any time, including after the target date. For more details regarding the risks affecting this Portfolio, please see the Principal Risks section of the prospectus.

ANNUALIZED PERFORMANCE

Performance for the fund is reported net of all advisory fees and includes reinvestment of dividends and other earnings. Performance less than one year is not annualized. Performance data shown represents past performance and is no guarantee of future results. Current performance may be higher or lower than the performance shown. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost.
